PROFESSIONAL SUMMARY

Software engineer with 15+ years building high-volume banking and public-sector platforms, working with applied AI since 2023 as an AI-Native Software Engineer. I build products where the AI model is part of the flow — from the Next.js interface to direct integration with LLM APIs (Claude, GPT), multi-step orchestration, and function calling — always balancing cost, latency, and response quality against business value. Solid backend and architecture foundation in financial services: .NET, Node.js, microservices on AWS/Azure, and legacy modernization into microservices and micro-frontends.

CORE SKILLS

Development

Languages & Frameworks: C#, .NET / .NET Core, Node.js, React, Next.js, Angular, TypeScript, JavaScript, SQL Server / T-SQL

Cloud & DevOps: AWS (Lambda, SQS, RDS, S3, EC2, CloudWatch), Azure (App Service, Functions), CI/CD (GitHub Actions, Azure DevOps), Kubernetes

Architecture & Data: Microservices, Event-Driven Architecture, Kafka, RabbitMQ, Micro-Frontends (Module Federation), SQL Server, PostgreSQL, Kibana, Datadog

Testing & Quality: Playwright, Integration & Unit Testing, Clean Architecture, SOLID, Code Review at Volume

AI

LLMs & Orchestration: Claude, OpenAI/GPT, Gemini, Azure AI, RAG, GraphRAG, Embeddings, Reranking, Function Calling, Multi-Agent, Structured Output, Temporal, Voice AI, Conversational/Sentiment Analysis

Agentic Engineering: Claude Code, Spec-Driven Development (SDD), MCP Servers, Subagents, Agent Skills, CLAUDE.md/AGENTS.md

Behavioral

Autonomy: Full technical ownership of deliveries end-to-end, from conception to production

Communication: Direct interface with product and business teams, working in regulated environments (financial and public sector)

PROFESSIONAL EXPERIENCE

AI-Native Software Engineer — Softplan

May 2026 – Present

Build LLM-powered features for public prosecutors' offices, government ministries, and courts, from conception to production, with full ownership of delivery and participation in architecture. (.NET, LLMs, Playwright)

Build the Next.js and React interfaces that deliver these features, combining model output with the business rules the prosecutors' offices require. (Next.js, React, TypeScript)

Design RAG and GraphRAG pipelines (retrieval, reranking, embeddings) and multi-agent orchestration with tool calling, MCP, and structured outputs, plus durable workflows with Temporal, continuously tuning cost, latency, and response quality. (RAG, GraphRAG, Reranking, Embeddings, MCP, Multi-Agent, Structured Output, Temporal)

Develop day to day with AI coding agents — the written spec as the agent's contract — and own the configuration layer that steers them (CLAUDE.md, AGENTS.md, subagents, skills, purpose-built MCP servers), so conforming code is the default output. (Claude Code, SDD, MCP Servers)

Senior Software Engineer — BRQ Digital Solutions (Itaú & BTG Pactual accounts)

Feb 2022 – May 2026

Contributed to the architecture of mission-critical systems at two of Brazil's largest banks, breaking monoliths into event-driven services that isolate failures and keep operations stable at high volume. (.NET 5+, Node.js, AWS, Azure, Kafka, RabbitMQ)

Built and maintained the APIs powering the platform's financial operations, with continuous delivery, automated testing, and monitoring, cutting the time to identify and fix incidents. (GitHub Actions, Azure DevOps, Kibana, Datadog)

Built the micro-frontends that replaced the monolithic front end, giving each team autonomy, and migrated the legacy Angular applications. (React, Angular, Vite, TypeScript, Module Federation)

Built the AI agents running in production at Itaú Unibanco, at national scale, for sentiment analysis in customer support, integrating directly with the model APIs. (GPT)

Full Stack Developer — IPDV, Strategic Systems Intelligence

Jun 2021 – Feb 2022

Acted as technical lead on the project — a lean team where each developer owned a product — with direct participation in planning alongside the PO. (Technical Leadership, Product Planning)

Held full technical ownership of the project (from the APIs to the cloud architecture): built the service and operations screen from scratch for the Droga Raia and Drogaria Pacheco pharmacy chains, replacing manual consolidations. (NestJS, PostgreSQL, AWS, React, TypeScript, .NET)

Previous Experience — Rio Saúde, MyCloud Software, Freelance, Brazilian Army and Brazilian Navy

Feb 2011 – Mar 2021

Systems Analyst and Full Stack Developer: kept critical public health systems running during the COVID-19 pandemic, optimized the nationwide field work-order system for Oi Telecomunicações, and migrated legacy desktop (Windows) systems into .NET web applications. (.NET Core, Java, C#, SQL Server, PostgreSQL, JavaScript)

AI PROJECTS

Legal Workflow Automation with RAG — Softplan

Built workflows with RAG and function calling to automate process steps for the Public Prosecutor's Office, Attorney General's Offices, and Courts, integrating model output with the business rules of the legal domain. (RAG, Function Calling, .NET, LLMs)

AI Agents for Internal Automation — Itaú Unibanco

Built AI agents for internal process automation and applied AI to card products, integrating directly with the model APIs. (AI Agents, Process Automation, GPT)

Gemini Live — real-time bidirectional AI voice system

github.com/mayconlemonsCloud/gemini-live-voice

Real-time bidirectional audio pipeline on the Gemini Live API: native speech-to-speech, with no intermediate transcription step.

EDUCATION

B.S. in Information Systems — Faculdade Mercúrio

2013 – 2017

Technical Diploma, Information Technology — CETAP

2012

CERTIFICATIONS

Anthropic Academy — Claude 101 (2026)

Microsoft Azure Fundamentals (AZ-900)

Assessment for AWS Partner: Accreditation (Technical)
